

Microflex™ - Chosen by Top Teams, Sanctioning Bodies, & OEM's

When extreme precision is a must, top racing teams, technical inspectors, and OEM car manufacturers turn to Microflex™ Scale Systems. Featuring an industry-leading four load cells per pad, these wireless scale systems provide the utmost in precision weighing, an increased pad and system capacity, and the lowest deflection pads available.

“Without the Microflex scale system at the track and at the shop, chassis setup would be unimaginable,” said Joey Fellores of Joe Gibbs Racing, “With the precision 4 load cell system, we can gain the accuracy and repeatability that it takes to win a championship.”

The four load cell construction results in higher capacities while maintaining the same precision and accuracy people have come to expect from Intercomp, making these scales a popular choice for pull down rigs and other applications requiring a higher amount of weight capacity. These scales also tout virtually zero deflection no matter where they tire is touching, for extremely repeatable weight readings across the entire face of the scale; even with large amounts of camber and caster.

On top of increased capacity and ultra-low deflection, Microflex scales harness the proven power of RFX™ Wireless Weighing to deliver weight readings and percentages without cables or wires directly to a wireless indicator or computer. And with the iRaceWeigh™ Module, users can control scales and get their weights directly on an iPhone®, iPad®, iPod Touch® or any smartphone or tablet for Android™.

“Besides the quality of the Microflex scale system, you don't have any cords laying on the ground. Having the wireless feature allows us to make changes quicker and more efficient than in the years past,” added Fellores.
