FOR IMMEDIATE RELEASE

Intercomp's TL8500™ and TL8000™ Tension Links Incorporate RFX™ Wireless Weighing Technology!

Minneapolis, MN - Intercomp's new Tension Link Scales now feature Fully Integrated RFX™ Wireless Weighing Technology. These Tension Link Scales are a load monitoring device used for controlling overhead loads and line tension applications while remaining a cost-effective solution. RFX™ Wireless Weighing Technology uses no external antennas and ensures dependable, accurate and safer weighing.

The TL8500™ features a large, backlit LCD Graphic Display on the scale, with the option to purchase the all-new RFX™ Wireless TL-RFX™ Indicator. The scale's easy-to-use membrane switches allow simple, trouble-free operation. Features include Set Point, Peak and Low Battery Indication as well as Mode and On/Off hard keys.

Capacities range from 500lb (250kg) to 500,000lb (250,000kg) with industry standard accuracy. TL™ Series Scales operate on easily accessible, standard alkaline, 9V batteries lasting up to 300 hours of continuous use and up to 2000 hours in standby mode. All electronics are shock-mounted in a NEMA 4x/IP65 weatherproof aluminum or stainless steel housing depending on capacity, protecting against moisture, dust and rough usage.

The convenient, compact, TL-RFX™ Indicator controls the unit and boasts a large, easy-to-read, backlit display. The TL-RFX™ Indicator fully operates scale functions and offers three different screen views including single weight, accumulated weight and the ability to read four scales at once. The TL-RFX™ Indicator communicates with a line of sight of 300' (90m) and is powered by standard, alkaline, AA batteries, which will operate up to 40 hours of continuous use.

For applications where viewing a display at the link is not feasible or protection from extreme elements is a must, the TL8000™ is a cost-effective alternative. It contains all the same functionality of the TL8500™, less the LCD graphic display and is packaged with the TL-RFX™ Indicator.
