FOR IMMEDIATE RELEASE

Intercomp Wireless Scales Dominate Daytona 500

Minneapolis, MN – In an exciting finish in the 2016 Daytona 500, the Joe Gibbs Racing FedEx #11 Team took the checkered flag, the first Daytona 500 win for driver, Denny Hamlin. Throughout the race Hamlin and fellow teammate, Matt Kenseth, lead a total 135 of the 200 laps to demonstrate the dominance of JGR on the track. And while Kenseth would end up finishing 14th due to a last second move to take a higher blocking line, the other JGR drivers, Kyle Busch and Carl Edwards, would end up taking 3rd and 5th, as the second wave of the JGR strike.

As part of their successful racing strategy, Joe Gibbs Racing turns to Intercomp and Microflex™ Precision Four Load Cell Scale Systems for extremely accurate, podium-proven setups. The four load cells construction results in higher capacities while maintaining the same precision and accuracy people have come to expect from Intercomp. These scales also tout virtually zero deflection no matter where they tire is touching, for extremely repeatable weight readings across the entire face of the scale; even with large amounts of camber.

On top of increased capacity and ultra-low deflection, Microflex scales harness the proven power of RFX™ Wireless Weighing to deliver weight readings and percentages without cables or wires directly to a wireless indicator or computer. Intercomp's industry-leading, track tested, RFX™ Wireless Weighing Technology is the most advanced wireless weighing technology of its kind & is trusted by officials and champions in all forms of motorsports.
