

TS30™ CPU - Touchscreen Indicator

Rugged Indicator for Portable WIM & Static Scales

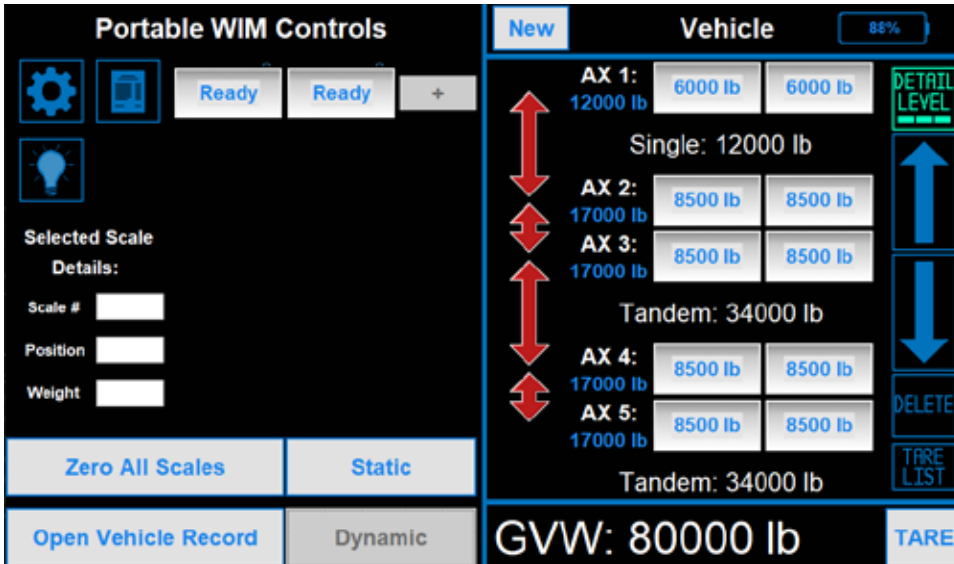

Advanced Touchscreen Indicator for Self-Contained Operation of Portable Scales

Operating portable scales just became easier with the TS30™ CPU from Intercomp. The touchscreen user interface built into this stand alone indicator allows operators to set up scale configurations, weigh vehicles, and create tickets and weighing records rapidly. Designed to wirelessly connect to Intercomp's portable static and Weigh-In-Motion scales, the TS30™ makes the process of weighing a vehicle easier and safer.

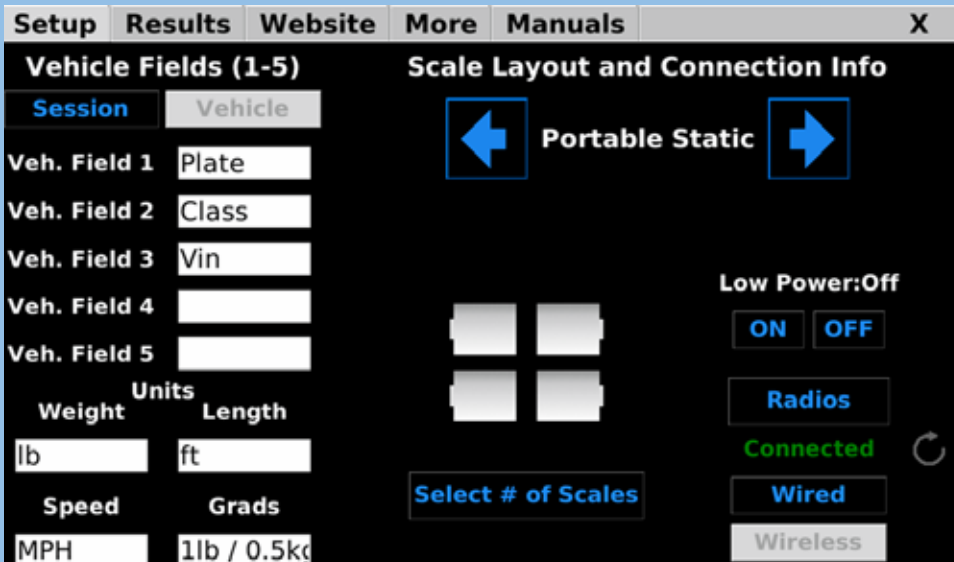

Class III / III L NTEP Certified for direct enforcement in static weighing mode.

TS30™ CPU Touchscreen Indicator

A Simple & Easy-to-Use Touchscreen Indicator for Vehicle Weighing

Weighing operations are displayed on a single screen, with scale status, operation, and recorded data shown. On the left, scale configuration, weighing mode, and functions are accessible. On the right, users can view axle, axle group, and Gross Vehicle Weights (GVW) at a glance. Single scale details are available, and weighing and storing records for long multi-axle vehicles is possible. Accessing other screens to print, recall, or edit vehicle information is readily available with on-screen options.

System setup screens show how flexible and powerful the TS30™ user interface is for users. Text field labels are customizable, with user session information available to be saved for weighing for that day and location. Vehicle specific information can be entered for complete reproduction on the integrated ticket printer or export and downloaded.

The TS30™ CPU provides the ability to process weight-related data for using static and WIM scales for vehicle weighing, in a self-contained, weather-resistant, hardened case.

The CPU features intuitive displays for scale system operation. Weights from single scales, axles, axle groups, and GVW are displayed in real time, with axle spacing calculated in WIM mode. The User Interface allows configurable user and session fields that are included on the ticket created by the built-in printer.

Featuring RFX™ technology, the TS30™ can wirelessly communicate with static and Weigh-In-Motion Scales saving time and improving safety.
