FOR IMMEDIATE RELEASE

Intercomp Introduces CSP™ Portable Test Stand for Wheel Load Scales

Minneapolis, MN – Intercomp Company, a manufacturer of fixed and portable vehicle weighing and measurement products, announces the CSP™ Portable Test Stand as part of its complete line of test and calibration equipment.

Optimized for mobility, the [CSP™ Portable Test Stand](#) is easily transported using integrated forklift pockets and can be set up on any flat, level surface, such as a floor or truck bed. Specifically designed for wheel load scales, the size provides users with an economical and flexible solution ideal for locations with limited space or for bringing to job sites or locations where a large number of scales are stored. The rigid steel frame and test platform minimize the uncertainty budget, leading to accurate, reliable calibration of scales.

With a capacity of 30,000 lb (13,600 kg) and a test platform area of 31 x 48 inches (787 x 1219 mm), the press is capable of calibrating a wide range of Intercomp's single and dual-tire portable wheel load scales. The high-speed hand pump uses standard hydraulic fluid and features two speeds. The high-quality hydraulics offer long-term stability of applied loads and parameters for the prevention of overloading.

Intercomp's Portable Calibration System presents calibration labs with a cost-effective, easy-to-manuever mobile test stand for portable wheel load scales. Intercomp also offers Factory Calibration Services year round that can be arranged by calling Intercomp's Service Department.
