FOR IMMEDIATE RELEASE

Intercomp introduces ruggedized, portable wireless indicator featuring touchscreen interface for remote WIM and static scale operation.

Minneapolis, MN – June 10, 2020 – Intercomp, the world’s largest manufacturer of portable vehicle weighing and measurement products, has introduced its new Model TS30™ CPU, an advanced touchscreen indicator for self-contained operation of portable scales. The touchscreen display and intuitive graphic user interface is housed in a rugged, standalone wireless indicator which allows operators to set up scales, weigh vehicles and create weighing records with greater speed, flexibility, and operator safety.

Designed to connect wirelessly to Intercomp’s portable static and Weigh-In-Motion (WIM) scales, the TS30™ CPU provides the ability to collect and process vehicle weight data on a single screen. The user interface is customizable for languages and local requirements around the world via simple USB connection. Weights from wheels, axles, axle groups, and Gross Vehicle Weights (GVW) are displayed in real time, with axle spacing calculated in WIM mode. The standard TS30™ format allows vehicle and user session information to be customized to the preference of each operator. Vehicle-specific information can be entered for complete reproduction on the integrated ticket printer or exported and downloaded.

“The intuitive display of the color touchscreen indicator makes scale system operation easier and more productive for weighing operations,” said Jon Arnold, Market Specialist at Intercomp, “and vehicle wheel, axle, group and gross weight information are viewed at a glance. Scale control functions and operations communicate via our proven RFX® wireless technology, so one operator can easily perform WIM or static weighing operations without cables on the easy-to-use operating system.”

The TS30™ CPU features Intercomp’s RFX® wireless remote communication capabilities, providing line-of-sight connectivity up to 300 ft (90 m), and the ability to connect with up to 12 scales. The CPU offers on-board storage capacity for over 2 million separate weight records, and data can be exported via multiple USB or Ethernet ports. The CPU has the intuitive touchscreen interface, rechargeable battery, and thermal printer integrated and self-contained in a ruggedized all-weather case, built to withstand the demands of portable weighing operations.
