FOR IMMEDIATE RELEASE

LD820™ RFX® Bluetooth® Indicator Simplifies TMR Applications

Minneapolis – Intercomp, a leading innovator in the design and manufacturing of systems combining wireless control with precision weighing capabilities, introduces the LD820™ RFX® Bluetooth® Indicator, an advanced indicator ideal for TMR applications.

"Intercomp's LD820 delivers the best value for a TMR scale indicator. Bluetooth technology streamlines the process of integrating with leading ration management software. The intuitive design paired with optional RD800 Remote Display, or HH520 Wireless Handheld cab control, simplifies the batching process," explained Billy Folkerts, Sales Representative for Intercomp On-Board/Agricultural Products.

The LD820™ features a 6" x 2" Alphanumeric LCD Display which provides clear visibility in all lighting conditions and large tactile buttons for easy use, even while wearing gloves. The intuitive nature of the indicator reduces training needs, making it accessible to more users. Intercomp's LD820™ features three total RS232 outputs, including two bilateral outputs.

The LD820™ indicator works directly with RD800™ LED Remote Display to display weights and integrated Bluetooth® technology facilitates direct communication with feed management programs. Intercomp's patented RFX® wireless technology allows communication with handheld remotes, such as the HH520™ Wireless Handheld Indicator, with line-of-sight connectivity of up to 300 ft (90 m).

Intercomp manufactures state-of-the-art on-board weighing solutions for farm and agricultural applications that are designed for rugged environments while monitoring a wide range of payloads. Intercomp's on-board weighing and automated control systems with RFX™ Wireless communication offer a complete solution compatible with a variety of equipment.
